Projects (Available in portfolio)

Projecc
Real-time text messaging app inspired by Discord.
- Fully developed front-end using React and Redux
- Integrated websocket connection for real-time app interaction between users like sending friend requests and messages
- Engineered back-end API with Node.js and Express
- Setup MongoDB as a database for storing, sending, and creating messages, projects, friends, and user information
- Implemented cloud technology using Cloudinary to change and save profile images

Benefitted
Landing page for Benefitted.
- Designed the UI/UX of website
- Implemented front-end with React and Context API
- Incorporated Meta's Instagram Basic Display API to display posts from the bussiness' public Instagram account
- Applied custom animations using GSAP for each section of the site
- Created a "reserved day" functionality using MongoDB and Express to allow admins to reserve a specific day to display to users that said day is booked
